

# Astrologia Demo

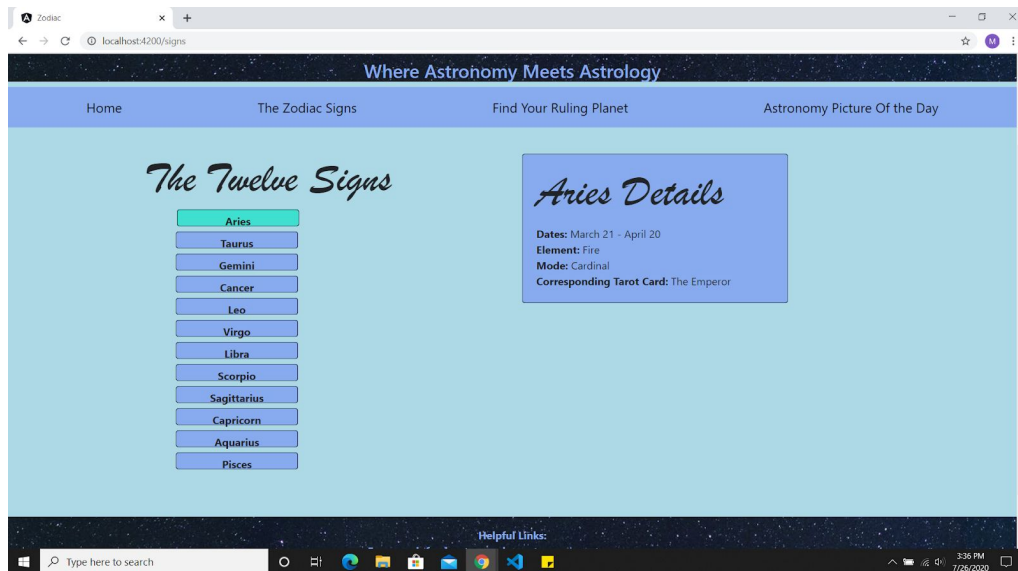

## Landing page:

The landing page contains a navigation bar with links to the app's three features.

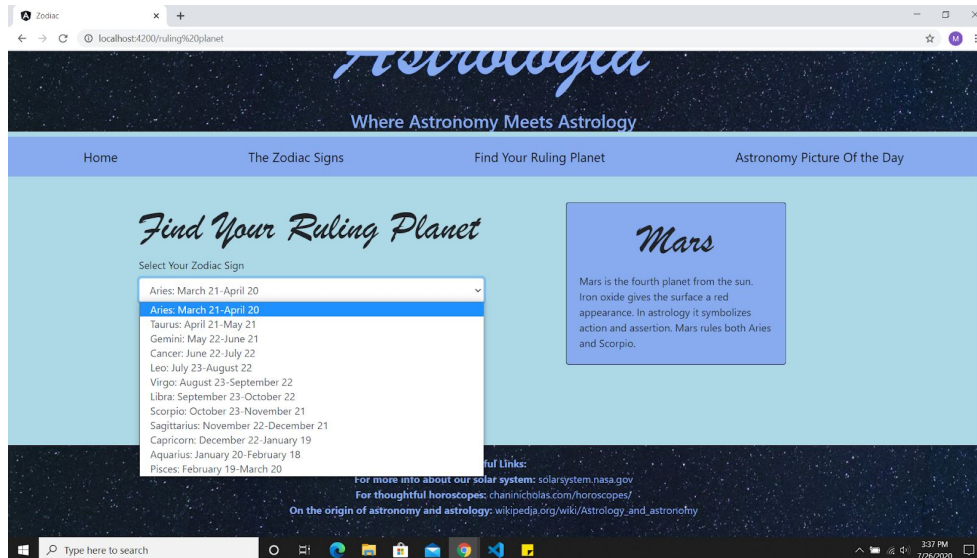

## Zodiac Signs:

The Zodiac Signs feature contains a list of clickable astrological signs that are displayed using a for-loop. When a user clicks on one of the zodiac signs, a card appears in the right column with basic info about that sign.

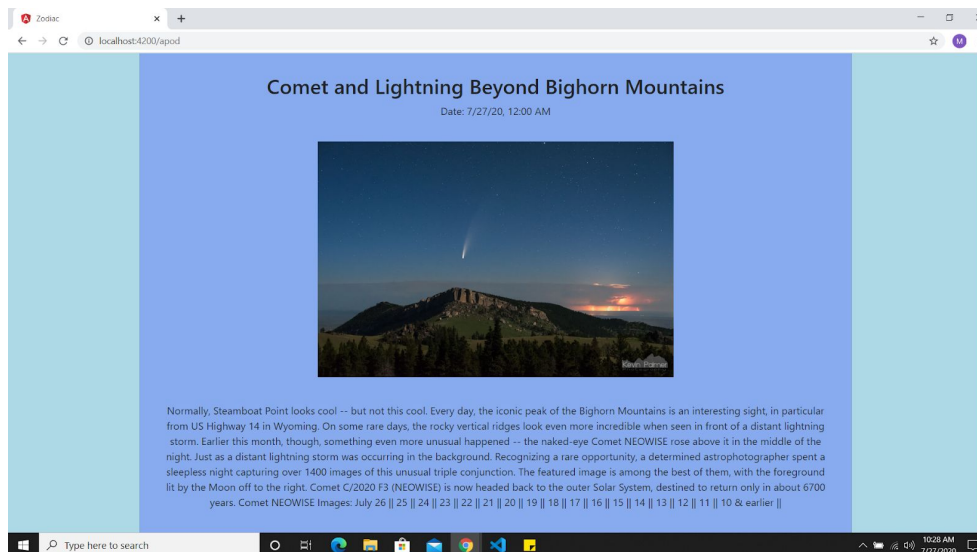

## Find Your Ruling Planet:

This feature contains a drop down form with the twelve zodiac signs as options along with their corresponding dates. When a user selects their sign or birth date range, a card appears in the right column that displays the ruling planet for that sign with astronomical info about that planet.

## Astronomy Picture of the Day:

This feature fetches data from one of NASA's open APIs. Astronomy Picture of the Day (APOD) is a popular webpage that has posted an astronomical image everyday since 1995. This app fetches the title, date, picture, and description of APOD's current data.

## Footer:

The footer of the application contains three links to web pages that inspired the content for this app.
